

The Challenge

Nelson Mandela University, in collaboration with Cenex and uYilo e-Mobility Programme, conducted a project towards building capacity, capability and knowledge for the implementation of the National Department of Transport's Green Transport Strategy, to support low-carbon transition and emission reduction.

The aim was to increase gender balanced knowledge and guidelines for enabling adoption of electric transportation.

The Development

Nelson Mandela University delivered 7, two-day, online training interventions focusing on the South African electric transport landscape. Cenex supported this with eight online webinars on:

- Electric vehicle charging infrastructure
- Business case and fleet electrification
- Electric vehicle policy and regulation
- Electric buses

Cenex also supported two webinars focussed on Gender Equity and Social Inclusion (GESI) for electric transportation

The Results

The webinars have been really well received and really spurred on a mind shift in many of the attendees on their thinking about EVs and eMobility.

Follow up work has been commissioned to repeat the training and webinars to a wider audience.
